

VENUS GLOBAL TECHNOLOGY AI Skills, Capabilities

Empowering modern organizations with autonomous multi-agent networks, domain-tuned LLM reasoning

45%

Operational Speedup

3.8x

Average Enterprise ROI

Building Intelligent Enterprises

Modern organizations sit on vast amounts of structured and unstructured data, but traditional enterprises struggle with embedding active AI capabilities into core operations.

CORE MISSION

Active Enterprise Intelligence

Transform static databases into self-reasoning workflows that execute transactions, spot anomalies, and trigger proactive alerts.

TECHNOLOGY EDGE

Domain-Trained Models

Custom fine-tuned LLMs trained on finance, supply chain, and compliance schemas to ensure deterministic precision without hallucinations.

Why Enterprises Need Intelligent Transformation

Legacy enterprise software creates operational friction. Business velocity is throttled by disconnected silos.

THE LEGACY CHALLENGE

Passive Systems & Data Silos

Traditional ERPs require manual user input for every transaction. Data sits locked in static tables, forcing decision-makers to rely on outdated end-of-month reports.

THE VENUS
AUTONOMOUS

AI agents orchestrate data streams in real-time, enabling proactive decision-making.

04 — THE OPPORTUNITY

From Traditional Systems to Intelligent Enterprises

Unlocking hidden business value by layering intelligence over existing ERP, operational data, and cloud

STRATEGY

Layered Intelligence

Rather than replacing legacy SAP/Oracle installations, Venus injects an autonomous multi-agent reasoning layer over existing SQL tables and APIs.

Connecting AI With Enterprise Operations

Watch natural language business prompts translate instantly into multi-agent intent routing, deterministic

SCENARIO 1

Unpaid Invoice Audit

Executing SQL on SAP BSEG table. Matched PO #99401 with Vendor Invoice #INV-88320 (Confidence: 99.8%). Triggered PostJournalEntry() -> Tx #00928174.

SCENARIO 2

Logistics

Rotterdam through Antwerp

06 — CORE SPECIALIZATION

Venus Global Technology Specialization

Our deep focus spans four core technical domains engineered specifically for large-scale enterprise deployment.

DOMAIN 01

Domain Fine-Tuning

Custom LLM weights trained on SAP, Oracle, and enterprise schemas.

DOMAIN 02

Multi-Agent Networks

Specialized autonomous workers executing multi-step business logic.

DOMAIN 03

Vector Intelligence

Hybrid semantic search and retrieval engine.

Four Pillars of Enterprise Intelligence

A holistic architectural foundation ensuring scalability, governance, speed, and business alignment.

Building Intelligence Into Core Business

AI shouldn't be a separate dashboard—it must be embedded directly into daily operational workflows.

01. INGEST

Real-Time Ingestion

Stream database CDC change logs into vector memory store.

02. REASON

Contextual Evaluation

Agents evaluate triggers against SLA thresholds and corporate policy.

09 — PARADIGM SHIFT

From AI Assistance to Intelligent Action

Moving beyond basic chatbots that only answer questions to autonomous agent teams that complete end-to-end tasks

GEN 1 — CHATBOTS

Passive Q&A Chat

Summarizes documents but requires human manual data copying and entry.

GEN 2 —
VENUS
Autonomous Agent Teams

Executes SaaS workflows end-to-end

The Journey Toward Autonomous Operations

A structured 4-stage maturity framework designed to safely scale AI adoption without enterprise risk.

11 — USE CASES & PROTOTYPE

AI Agents & Enterprise Functional Prototype

Explore live mock data representation of automated invoice reconciliation handled by Venus AI Agents.

PROTOTYPE DATA

Automated Invoice Matching

Invoice #INV-9021 (\$42,500) -> Matched PO #4401 [Approved]
Invoice #INV-9022 (\$128,000) -> Tax Audit [Flagged]
Invoice #INV-9023 (\$18,400) -> Matched PO #4405 [Approved]

Settings

Making Enterprise Systems More Intelligent

Modernizing legacy infrastructure without expensive full-system tear-and-replace projects.

LAYER 1

Legacy Wrapping Layer

Deploy light API wrappers around SAP ECC 6.0 and AS/400 mainframes, exposing clean GraphQL and REST endpoints.

LAYER 2

Real-Time Analytics

Streaming data processing for operational awareness.

The Evolution of ERP Systems

How enterprise software has transformed from basic record-keeping to intelligent self-driving platforms.

1990s

System of Record

Manual data entry into static SQL tables.

2010s

Cloud ERP

Web dashboards and webhooks integration.

Intelligence Across the Enterprise Engine

A unified AI layer connecting all core enterprise operational modules into a single nervous system.

MODULE A

Order-to-Cash (O2C)

Automating order intake, credit checks, and automated invoice payment chasing.

MODULE B

Procure-to-Pay (P2P)

AI purchase order generation, contract evaluation, and 3-way matching.

AI Applications Across Business Functions

Realizing immediate operational throughput gains across administrative and high-value workflows.

FINANCE

Strategic Financial Planning

Running 1,000+ Monte Carlo scenario simulations based on real-time market data to guide budget allocations.

OPERATIONS

Predictive Maintenance

IoT sensor data analysis for early detection of asset failure.

Automate Work. Accelerate Operations.

Eliminating manual bottleneck tasks to free up human talent for strategic, high-value decision-making.

From Manual Work to Intelligent Operations

Redesigning key enterprise workflows from step-by-step human processing to autonomous AI-driven ex

BEFORE

Auto-Appro

AI That Works With Existing Technology

Venus AI overlays seamlessly with your existing tech stack without forcing migrations or vendor lock-in.

SAP

SAP Ecosystem

Native S/4HANA, ECC 6.0, BTP, and OData APIs.

ORACLE

Oracle Cloud

Oracle ERP Cloud, NetSuite, and Database 23c Vector.

MICROSOFT

MS Dynamics

Dataverse and Search.

Connected Technology Ecosystem Architecture

End-to-end technical data flow from enterprise source databases up to cognitive AI user interfaces.

LOGISTICS

Autonomous Logistics Telemetry

Connecting warehouse WMS, shipping APIs, and demand forecasts into a unified real-time command dashboard with automated rerouting.

Enterprise AI Must Be Intelligent and Trusted

Strict security, privacy, and compliance frameworks to guarantee safety for Fortune 500 deployments.

SECURITY

Tenant Data Isolation

Your corporate data is never used to train public weights. Isolated KMS encryption.

COMPLIANCE

Full Audit Logging

Every prompt, query, confidence score, and transaction recorded in immutable ledger.

From Opportunity to Enterprise Transformation

A pragmatic roadmap to deliver immediate quick wins in Phase 1 while building for long-term autonomy

PHASE 1 (WKS 1-6)

AI Discovery & MVP

Connect vector search to 1 core ERP table for immediate value proof.

PHASE 2 (WKS 7-16)

Agent Deployment

Deploy 3 multi-agent teams with human-in-the-loop approval workflows.

AI Solutions Across Industries

Tailored vertical models solving domain-specific challenges in manufacturing, retail, finance, and health

MANUFACTURING

Smart Factory AI

Dynamic production scheduling and raw material alignment.

RETAIL

Demand Sensing

Real-time localized demand forecasting and auto-restocking.

FINANCE

Risk & Compliance

Continuous transaction monitoring and AML pattern detection.

governance

One Integrated Transformation Approach

A seamless joint delivery model delivering speed, precision, and business accountability.

STEP 1

Joint Business Mapping

Kraey Globe identifies bottlenecks; Venus architects target AI agents.

STEP 2

Co-Engineered Build

Venus configures agent models; Kraey Globe validates business logic.

AI-Powered ERP Service Portfolio

Tailored service packages designed for every stage of your enterprise AI journey.

SERVICE 01

AI Readiness Sprint

2-week evaluation of enterprise data quality and high-impact use cases.

SERVICE 02

Agent Deployment MVP

6-week build delivering 2 functional multi-agent teams connected to ERP.

Creating the Intelligent Enterprise

Empowering leaders with real-time clarity, predictive foresight, and self-executing operational velocity.

VISION 1

Continuous Real-Time Awareness

Move from monthly backward-looking reports to instant continuous situational awareness across global operations.

VISION 2
